

microclover®

Trifolium repens var.

MICRO Clover

Many years of natural selections have resulted in revolutionary *Microclover*, with all the benefits of traditional clover packed into very tiny leaves.

Healthy & Lush

Microclover 'spoon feeds' nitrogen to the grass, producing a healthy, dense and naturally green lawn that is easy to maintain.

Weed Free Turf

The vigorous and dense growth of clover and grass together crowds out existing weeds and prevents new weeds from establishing. The unique dense stolon structure allows *Microclover* to tolerate exceptionally low mowing heights.

Green Lawn All Year Long

Microclover has been bred to stay green from spring to winter. The healthy growth of the accompanying grasses contributes to the overall attractive green color which remains throughout the year.

Environmentally Friendly

Very little fertilizer, fungicides and water are required for *Microclover*. It would be difficult to find more environmentally friendly, cost effective, and low maintenance turf solution.

*Darker plots planted with Microclover & traditional clover vs. Microclover.

Features

- ✓ Growth Habitat- Stolons
- ✓ Establishment rate - Good
- ✓ Mowing Frequency- 1 x weekly
- ✓ Traffic Tolerance - Excellent
- ✓ Nitrogen Required - None
- ✓ Shade Tolerance – Good
- ✓ Cold Tolerance – Excellent
- ✓ Drought Tolerance – Excellent
- ✓ Endophyte Enhanced – No
- ✓ Salinity Tolerance - Average

Benefits

- ✓ Naturally Green
- ✓ Crowds Out weeds
- ✓ Tolerate Low Mowing Height
- ✓ Low Maintenance
- ✓ Nitrogen Enhancement

Application

- ✓ Home Lawns
- ✓ Commercial Lawns
- ✓ Municipalities
- ✓ Parks
- ✓ Boulevards
- ✓ High Traffic Area
- ✓ Reclamation Sites

Seed Rate

680,000 seed/ lb

1 lb 1,000 ft²

20 – 40 lbs per acre
